

Case Swarm

How it works for the business

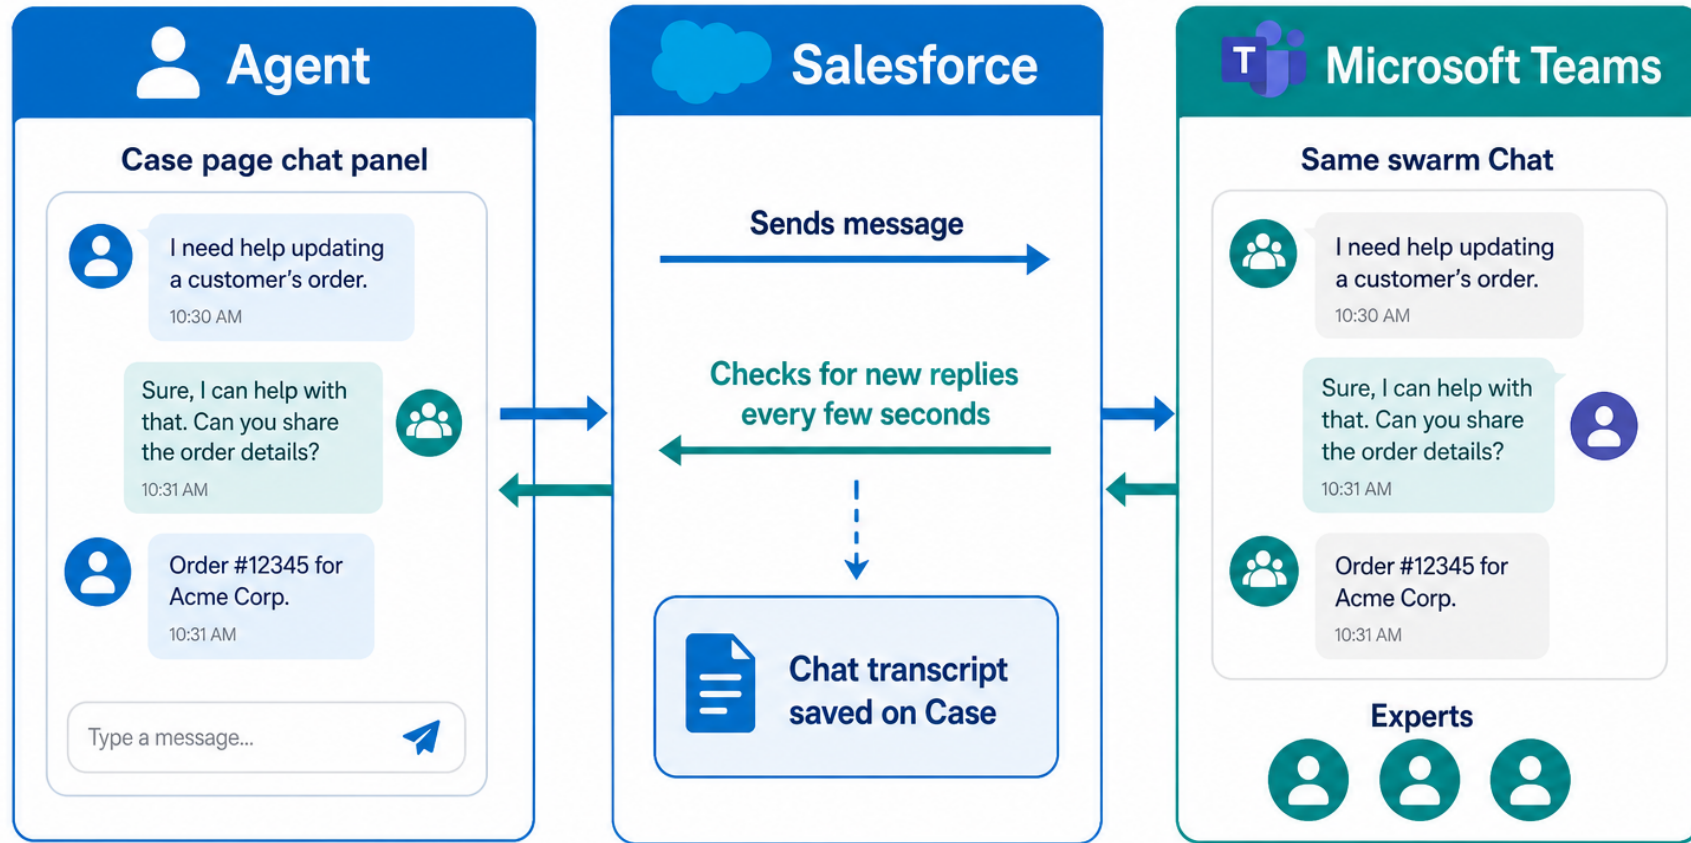

Two simple pictures: swarm in Teams only, or chat from the Case page with a transcript.

Case Swarm only — Collaborate in Teams

- 1) Agent starts a swarm on the Case and picks experts. 2) A Team or Chat is created in Microsoft Teams. 3) Experts collaborate in Teams (and can use a Case card). 4) Salesforce keeps the Case and an Open in Teams link - not a full chat transcript.

Case Swarm + Chat in Salesforce

1) Same swarm Chat in Teams. 2) Agent can message from the Case page. 3) Expert replies in Teams appear in Salesforce within a few seconds. 4)

Messages are saved as a transcript on the Case for desktop and mobile. **Agent works in Salesforce • Experts work in Teams • Transcript stored on the Case**

Which mode fits?

Question	Swarm only	Swarm + Salesforce chat
Where do experts talk?	Teams	Teams
Agent chats from Case page?	No (opens Teams)	Yes
Transcript on the Case?	No	Yes
Best when...	Experts live in Teams	Agent stays in SF + needs audit trail
